VAKA® Access Control System

A smart and secure choice for apartment buildings

VAKA®

Easy to plan, install, manage and use.

What customers say about VAKA®

We truly value feedback from our clients and partners.
Here, we share what they have to say about us and our products.

> *VAKA® is the best-in-class solution for security and entry phone systems in apartment buildings – packed with the features that matter, priced right, and simple to use.*
> Fredrik Johansson, Security Systems Installer, Ketab Bollebygd

> *VAKA® is cost-effective, and the product design is a good fit with the style of our area here in Märsta. The system is user-friendly and easy to work with, making it simple to manage.*
> Victor Nordensson, Husaren housing association

> *The system is simple, secure and exactly what many housing associations are looking for. Its scalability makes it easy to add new features. It's also excellent value.*
> Mikael Hjörnhede, Property Manager, HSB Mölndal

> *Residents are issued a key fob to open the main entrance. If it's lost, it can simply be deactivated in VAKA®, preventing unauthorized access. The digital info displays make it easy to share updates with residents – meaning fewer paper notices in mailboxes. What's more, the support we get from Axema is excellent.*
> Joakim Gustavsson, Head of Construction and Property, Tranemobostäder

A future-proof access control system for the entire building

Thanks to its scalability, fast installation, and ease of use, VAKA® is in a class of its own. Start small with a basic code lock or go all-in with a full IP-based access control system that maximizes security in every part of the building. Open the door to a future-proof and cost-effective investment. VAKA® is built to grow with you.

"Maximize security throughout the building"

» Future proof

» Cost-efficient

» Scalable and flexible

» Accessibility ready

» User-friendly

» No license or recurring fees

5 year guarantee

VAKA® – a versatile access control system that grows with you

Protect every part of the property – from the main entrance to the garage. With VAKA® you control access to doors and restricted spaces. Manage services like entry phone systems, digital booking panels and info displays, smart mailboxes, and cable-free offline locks – all in one platform. Replace traditional keys with personal key fobs that can be quickly deactivated when necessary. Designed with accessibility in mind, VAKA® offers features such as extended door hold-open time and voice prompts to assist users as they enter. VAKA® is a cost-efficient, future-proof access control system that enhances security and simplifies everyday life for residents.

Waste disposal and basement storage areas

Offline locks

Handle-equipped offline locks are easy to install, no license fees required. Cost-efficient, cable-free security for doors in shared spaces, apartments and storage areas.

Readers

Durable, keypad-free reader for high security. Access is granted via key fobs, which can easily be deactivated in VAKA®.

Apartments

Offline locks

Cylinder-style offline locks are easy to install in apartment doors, offering a cable-free, cost-effective security solution.

Entrances

Create safe, welcoming entrances for residents and guests. Simplify daily life and enhance security with smart solutions. Start with a code lock or scale up right away.

Entry phone systems

An entry phone system instantly enhances building security. Let visitors in with a tap on your mobile phone.

Attic spaces

Readers
Easy access with a code or key fob. Illuminated keypads and spoken messages guide users with ease.

Offline locks
Handle-equipped offline locks offer a cable-free, cost-effective security solution. No license fee required.

Wireless connection
Wireless links make it easy to connect multiple buildings – no cabling required.

Laundry rooms

Digital booking panels
Easily and securely book shared spaces — such as laundry rooms, storage units, and guest apartments — directly through the VAKA® booking system.

Garages

Smooth and secure access to the garage, while blocking unauthorized entry.

Readers
Keypad-free outdoor reader with built-in speaker — ideal for remote opening.

Remote controls
Open garage doors, gates, and entrance doors from a comfortable distance using a remote control.

Digital info displays
Keep everyone in the building informed using a VAKA® digital info display.

Smart mailboxes
Increase security in the building with smart mailboxes. Easily opened with personal key fobs, managed in VAKA®.

Get started with VAKA®

Checklist for a smooth startup

VAKA® is easy to plan and install. Our checklist helps ensure that both you and the installer are fully prepared, simplifying site visits and the quotation process.

1 **Count all access points**
Add up the number of entrance doors and gates, including any garage doors, as well as doors to shared spaces to be connected, such as basements, attics, and laundry rooms.

2 **Assess accessibility needs**
Accessibility options such as extended door hold-open time, door automation, and voice prompts can easily be enabled in VAKA®. The system should be tailored to meet residents' needs.

3 **Add entry phone functionality**
VAKA® is designed for easy entry phone integration, making it simple to add the function right away or later when needed. It enhances security by allowing visitors access only after approval from a resident.

4 **Review existing cabling and electronic locks**
In many cases, existing cables can be reused when installing VAKA®, saving both time and money while reducing environmental impact. We also offer digital offline locks that require no wiring, operated with key fobs and managed directly in VAKA®.

5 **Add digital booking panels & info displays**
VAKA® can be further enhanced with a digital booking system, allowing residents to easily book shared spaces — such as laundry rooms and community rooms — directly via digital booking panels. Important announcements and information can also be clearly displayed on digital info displays.

6 **Start small or think big right away**
Begin with our compact A76 reader – including keypad and key fobs. Expand with the VAKA® access control and entry phone system as needed, or scale up right away.

We offer free site visits and are happy to put you in touch with a local installer.
Contact our sales team via our website axema.se/en/contact or give us a call +46 (0)8 722 34 40
